

Accu-Steel

BUILT AROUND

CATTLE

ENGINEERED FOR HERD HEALTH.

Take control of what matters most—from calf care to profitability—
with a building that works as hard as you do.

FABRIC-COVERED BUILDINGS

YOU WEAR A LOT OF HATS. WE HELP LIGHTEN THE LOAD.

You run a cattle operation, meaning you wear many hats: financial advisor, business manager, animal health specialist, weatherman. Yet so many factors are beyond your control. We know this firsthand.

That's why our buildings are engineered with your (and your herd's) specific needs in mind—to make the most out of what you put in: time, money, and heart.

MAKE EVERY DAY MORE PREDICTABLE. AND MORE PROFITABLE.

Accu-Steel fabric covered buildings help producers like you simplify the workday while strengthening your bottom line.

Faster time to market—calves finish 30-45 days sooner on average

Daily efficiency gains and more predictable labor costs

Flexible layouts to streamline feeding and cleaning

Better year-round access to your cattle

Reduced bedding and manure handling requirements

Easier herd management and observation

The goal is always less work and more return—and more confidence in your day to day.

COMFORT YOU CAN SEE. RESULTS YOU CAN MEASURE.

Accu-Steel buildings are designed for low-stress, high-health environments that improve performance across your herd.

- Dry bedding and consistent airflow = cleaner, healthier cattle
- Reduced respiratory issues, increased birth/conception rates
- Calving pens and cow/calf layouts designed for safety and observation
- Controlled indoor environment mitigates heat, cold, and mud
- Calves absorb nutrients better without needing to burn energy to stay warm

WHY PRODUCERS CHOOSE ACCU-STEEL

We don't sell pre-fab barns. We engineer smart site-specific solutions that help you manage risk and stay profitable — no matter the weather or market.

- Designed and built by people who understand cattle
- Engineered for your herd, location, and goals
- Trusted by top producers across North America
- Built on a Century Farm, made in Iowa
- Backed by a team that shows up before, during, and after the sale

DESIGNED TO WORK AS HARD AS YOU DO

Every detail of an Accu-Steel building is engineered for durability, ventilation, and ease of use—with minimal maintenance over time.

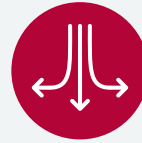

Hot-dipped galvanized steel frame protects against corrosion

Dual eaves and ridge vent systems help maintain fresh airflow year-round

Patented Enduro-Loc™ fabric resists tearing, mold, and UV damage

Curtain-ready designs for climate control

Individual bay Keder cover system reduces maintenance and maximizes weather security

Built to exceed local codes and withstand heavy snow and wind loads

FROM FOOTINGS TO FABRIC,
EVERY PART OF YOUR BUILDING
IS **ENGINEERED TO LAST.**

THINKING ABOUT EQIP FUNDING?

We've helped hundreds of producers secure EQIP support for their cattle buildings. Our expert team can walk you through what qualifies and how to get started.

FOUNDATIONS THAT FIT YOUR OPERATION.

Precast or poured concrete

L-panels, T-panels or jersey barriers

Deep pit systems

Reduce labor and environmental impact

I-beam

For long-term durability and easy site prep

Retrofits

Add a building to your existing feed apron or slope

Custom layouts

Designed around your machinery, herd size, and workflow
