

# ECONOMICAL GRAIN STORAGE.

*Economy & Protection, Looking out for Your Bottom Line*

Accu-Steel manufactures some of the largest flat storage buildings in the grain industry. Our engineering team has combined the proven Accu-Steel truss design with the latest in protective coatings and sectional keder covers for the perfect mix of strength and economy. With sizes ranging from 30' to 300' wide, Accu-Steel's designs specifically meet the needs of high speed receiving and large capacity grain storage at an unmatched cost per bushel.

Alternative to Traditional Grain Storage

Accu-Steel grain storage buildings are excellent alternatives to traditional grain storage facilities and provide greater versatility. By offering real air movement, clear span building space, and a more consistent environment, our grain storage structure can help reduce your overall cost per bushel – with the savings going straight to your bottom line.

Multi-Purpose

Accu-Steel Buildings are also multi-purpose structures. Their non-corrosive building components allow for bulk storage of fertilizer, chemicals, various other commodities, and to store equipment providing protection from outside elements.

Efficient & Economical

The natural light of an Accu-Steel Building delivers a bright, well lit working space without the use of an expensive lighting system. Not only will the Accu-Steel flat grain storage building give you a lower cost per bushel, the building may be used for different purposes year round, year after year.

Accu-Steel 140' Wide Grain Building - Bushel Capacity in Thousands
